

GENERIC TABLE OF THE RELATIVES

- all names are in relation to you (#16)
- upper left number = genetic similarity to you
- lower right number = individual ID (no other relevance)

Table does not account for inbreeding, or half relationships due to illegitimacy or parental deaths and remarriages. In my day, full siblings, halves, and steps were all considered equivalent in church matters (degrees of affinity restricting marriage), but not in legal matters of inheritance.
